## AFL SM Mini-Span 424, 6 fibers

AFL Mini-Span All-Dielectric Self-Supporting (ADSS) cable is designed for outside plant aerial and duct applications in local and campus network loop architectures. From pole-to-build to town-town installations, the Mini-Span cabling system, which includes cables, suspension, dead end and termination enclosures, offers a comprehensive transmission circuit infrastructure with proven, high-reliability performance. As the ADSS cabling concept implies, a separate messenger support wire hanging system is not required, greatly reducing installation time and improving upfront and maintenance labor costs.

Mini-Span includes fiber counts up to 144 optical fibers and any type of combination of single-mode and laser-optimized multimode fibers with the cable. Pole-to-Pole span lengths range from 50 feet to over 1000 feet. Custom ADSS design options allow span lengths of over one mile (5,280 feet).

## FEATURES:

- Various sizes and fiber accounts available to suit your specific requirements
- Fully self-supporting - no messenger wire or lashing required
- Full complement of attachment hardware available

## APPLICATIONS:

- Utilized for telecommunications by power utilities, telcos, and private network groups
- Ideal for FTTx projects where ease of deployment is needed
- Perfect for campus and municipal applications
